

Spring Retrospective

The test scripts and documentation went well. Writing the tests was fun and intuitive. Some unexpected issues came up when dealing with alerts but, I figured out how to handle the problem. Cucumber error codes were informative when unexpected errors showed up. The test cases for the added functionality could be more robust, I did not include file uploads in the add test cases. What needs to be completed in the next sprint would be to handle happy path and sad path testing specifically for the added functionality.
